

IMPROVED EFFICIENCY ON COMMERCIAL GAS MODEL

Starting February 13th, 2013, Giant Factories Inc. has improved the design of its Commercial Gas model **UG73-200N** to raise the thermal efficiency to 80%. This improvement allows higher recovery rates and fuel economy.

To do so, Giant has proceeded with several design changes on the inner tank, baffles, combustion chamber and burner configuration. The overall dimension, ports locations and draft hood outlet size remains the same as the previous model.

Following this change, model **UG73-200N** is now approved for elevation up to 7,700 feet (Normal & High altitude). Thus, model **UG73-200NH** is now discontinued and replaced by **UG73-200N**.
