

DESIGN IMPROVEMENT ON BLOWER CONNECTION

Starting February 22nd, 2013, Giant Factories Inc. has improved the design of its connection to the blower unit on model **UG50-65LFPV-...** and **UG50-59LFPV-...** The connection between the wiring harness of the water heater and the blower unit is now detached from the top pan.

By doing so, we are avoiding a potential issue where water that could accumulate on the top pan during installation, service or operation of the water heater could infiltrate the connector that was snapped to the top pan and create a short circuit.
